1 Introduction

1.1 Goal of this document

This configuration guide describes how to configure TheGreenBow IPsec VPN Client with a Billion BiGuard S10 VPN router.

1.2 VPN Network topology

In our VPN network example (diagram hereafter), we will connect TheGreenBow IPsec VPN Client to the LAN behind the Billion BiGuard S10 router. The VPN client is connected to the Internet with a DSL connection or through a LAN. All the addresses in this document are given for example purpose.

1.3 Billion BiGuard S10 Restrictions

No known restrictions.

1.4 Billion BiGuard S10 VPN Gateway

Our tests and VPN configuration have been conducted with Billion BiGuard S10, Bootrom version 1.13 & Software version 3.17.

	Doc.Ref	tgbvpn_ug-billion-biguard-s10_en
	Doc.version	1.0 – Nov 2008
	VPN version	4.2+

1.5 Billion BiGuard S10 VPN Gateway product info

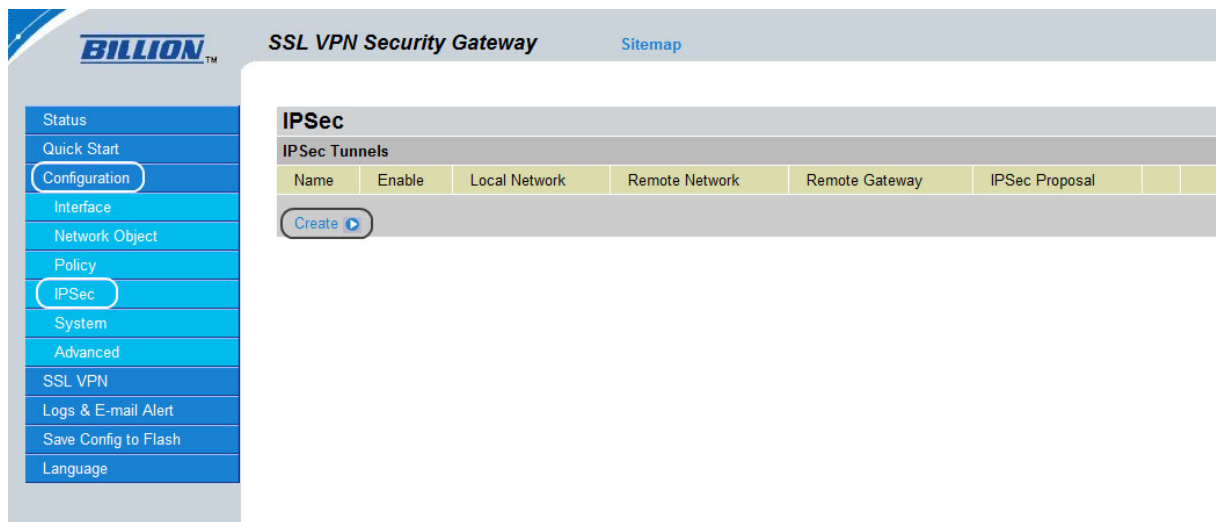

It is critical that users find all necessary information about Billion BiGuard S10 VPN Gateway. All product info, User Guide and knowledge base for the Billion BiGuard S10 VPN Gateway can be found on the Billion website: <http://www.billion.com/>.

Billion BiGuard S10 Product page	http://www.billion.com/product/biguard/biguards10.php
Billion BiGuard S10 User Guide	http://www.billion.com/Internet/datasheet/BiGuard_SSL_VPN_Series.pdf
Billion BiGuard S10 FAQ/Knowledge Base	http://www.billion.com/support/faq/faq-bi0.php

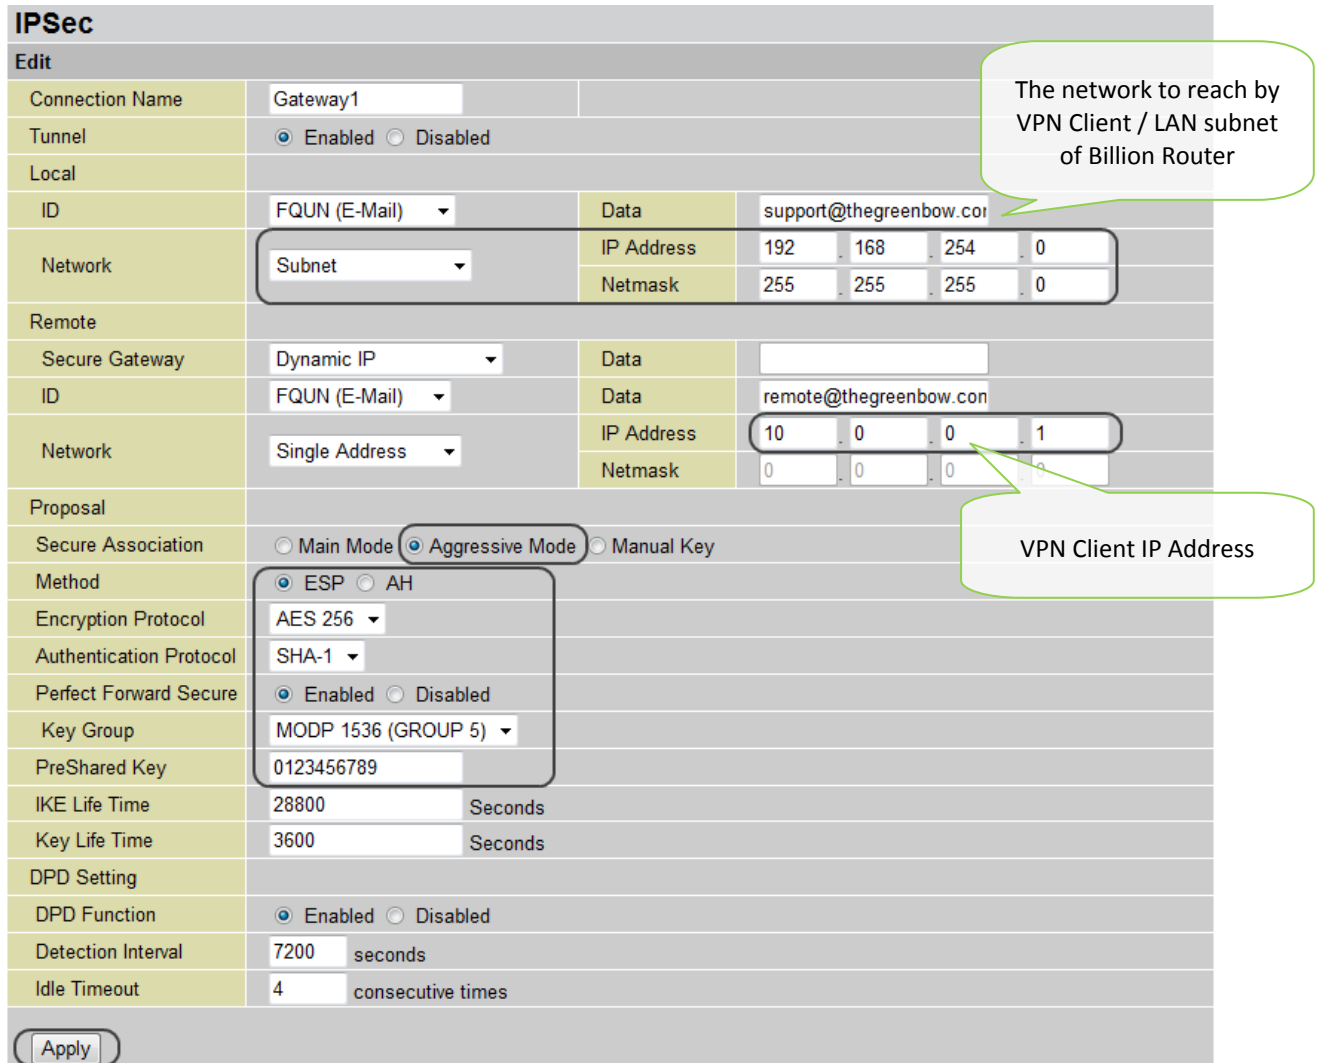

Doc.Ref	tgbvpn_ug-billion-biguard-s10_en
Doc.version	1.0 – Nov 2008
VPN version	4.2+

2 Billion BiGuard S10 VPN configuration

This section describes how to build an IPSec VPN configuration with your Billion BiGuard S10 VPN router. Once connected to your Billion BiGuard S10 VPN gateway, you must select "Configuration" and "IPSec" tabs. In this part, you click on "Create" in order to make a new IPSec Policy.

It will bring you to the following page in which you will fill in all parameters:

IPSec

Edit

Connection Name: Gateway1

Tunnel: Enabled Disabled

Local

ID: FQUN (E-Mail) | Data: support@thegreenbow.com

Network: Subnet | IP Address: 192 . 168 . 254 . 0 | Netmask: 255 . 255 . 255 . 0

Remote

Secure Gateway: Dynamic IP | Data:

ID: FQUN (E-Mail) | Data: remote@thegreenbow.com

Network: Single Address | IP Address: 10 . 0 . 0 . 1 | Netmask: 0 . 0 . 0 . 0

Proposal

Secure Association: Main Mode Aggressive Mode Manual Key

Method: ESP AH

Encryption Protocol: AES 256

Authentication Protocol: SHA-1

Perfect Forward Secure: Enabled Disabled

Key Group: MODP 1536 (GROUP 5)

PreShared Key: 0123456789

IKE Life Time: 28800 Seconds

Key Life Time: 3600 Seconds

DPD Setting

DPD Function: Enabled Disabled

Detection Interval: 7200 seconds

Idle Timeout: 4 consecutive times

Apply

The network to reach by VPN Client / LAN subnet of Billion Router

VPN Client IP Address

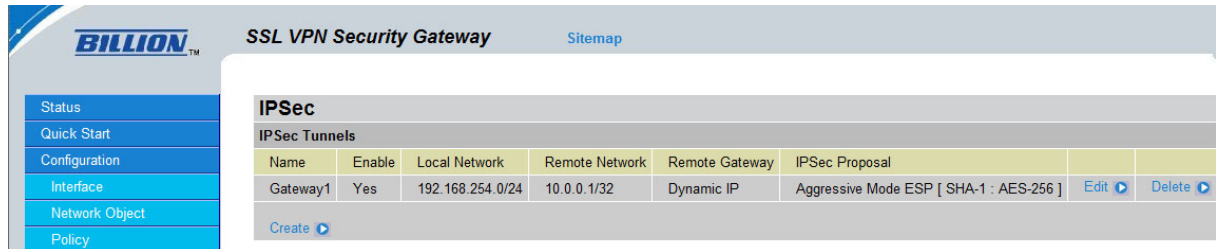

The local ID (support@thegreenbow.com) in this router corresponds to the Remote ID in the VPN Client whereas the remote ID (remote@thegreenbow.com) to the Local ID in Phase 1 Advanced in VPN Client software.

The local network corresponds to Remote LAN Address and for the remote network (10.0.0.1); it is for the VPN Client Address.

Then we selected the Aggressive Mode with an ESP method (using AES256 and SHA1), a PreShared Key (0123456789), and activated the PFS (Modp 1536 / Group 5).

	Doc.Ref	tgbvpn_ug-billion-biguard-s10_en
	Doc.version	1.0 – Nov 2008
	VPN version	4.2+

After having configured all these parameters of the Billion BiGuard S10 router, you click on Apply! You will see the below page:

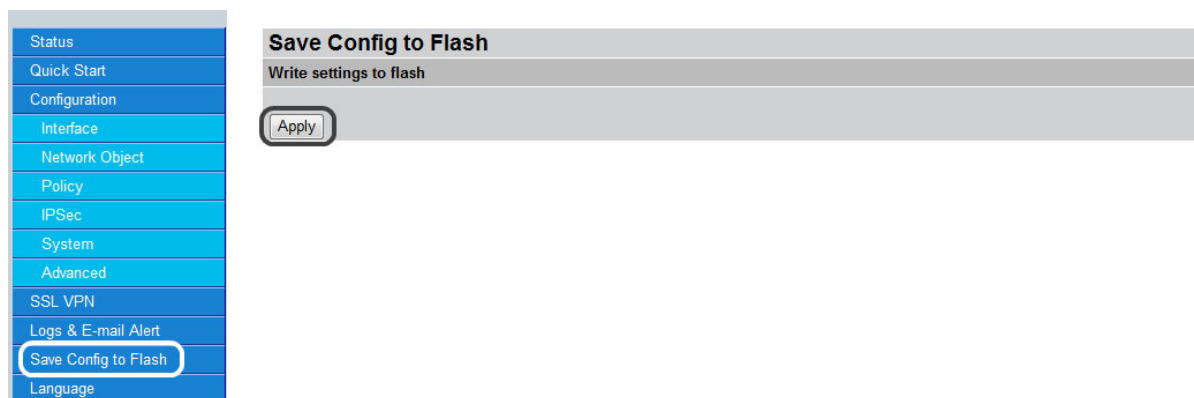

The screenshot shows the Billion SSL VPN Security Gateway web interface. The left sidebar contains navigation options: Status, Quick Start, Configuration, Interface, Network Object, and Policy. The main content area is titled "IPSec" and "IPSec Tunnels". It displays a table with the following data:

Name	Enable	Local Network	Remote Network	Remote Gateway	IPSec Proposal		
Gateway1	Yes	192.168.254.0/24	10.0.0.1/32	Dynamic IP	Aggressive Mode ESP [SHA-1 : AES-256]	Edit	Delete

Below the table is a "Create" button with a right-pointing arrow.

Click "Save Config to Flash" and "Apply".

The screenshot shows the Billion web interface with the "Save Config to Flash" dialog box open. The left sidebar is visible, with "Save Config to Flash" highlighted. The dialog box has the title "Save Config to Flash" and the text "Write settings to flash". Below this text is a single "Apply" button.

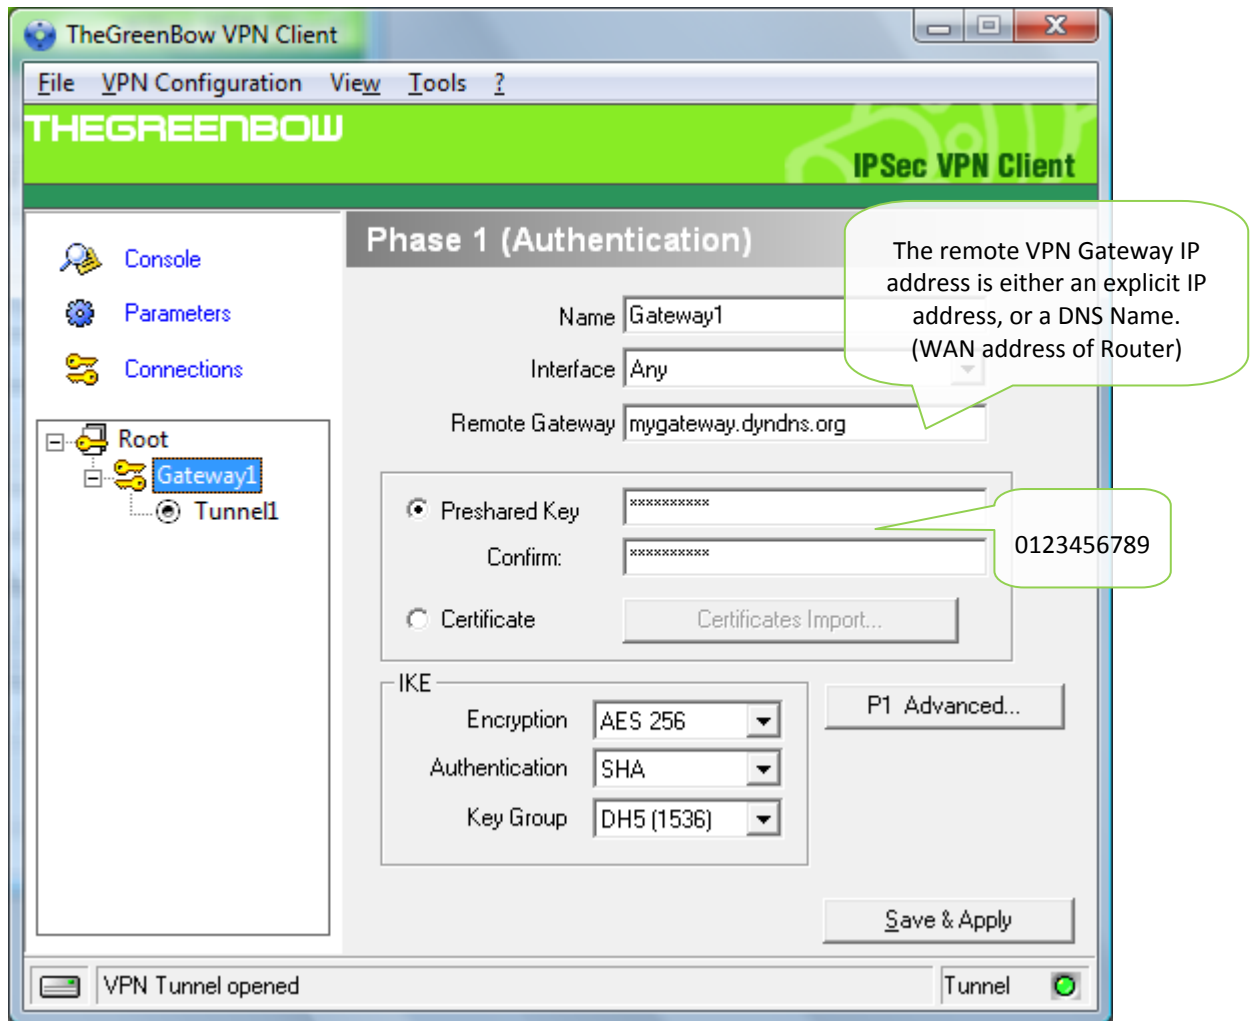

Now you've completed the configuration of the Billion BiGuard S10 VPN router for TheGreenBow VPN Client software.

3 TheGreenBow IPsec VPN Client configuration

This section describes the required configuration to connect to a Billion BiGuard S10 VPN router.

To download the latest release of TheGreenBow IPsec VPN Client software, please go to http://www.thegreenbow.com/vpn_down.html.

3.1 VPN Client Phase 1 (IKE) Configuration

Phase 1 configuration

So, here you find the same parameters as in the Billion BiGuard S10 router VPN Configuration (see page 5).

The 'Remote Gateway' shall match the 'WAN address' of the Billion BiGuard S10 VPN router.

Then click on 'P1 Advanced'.

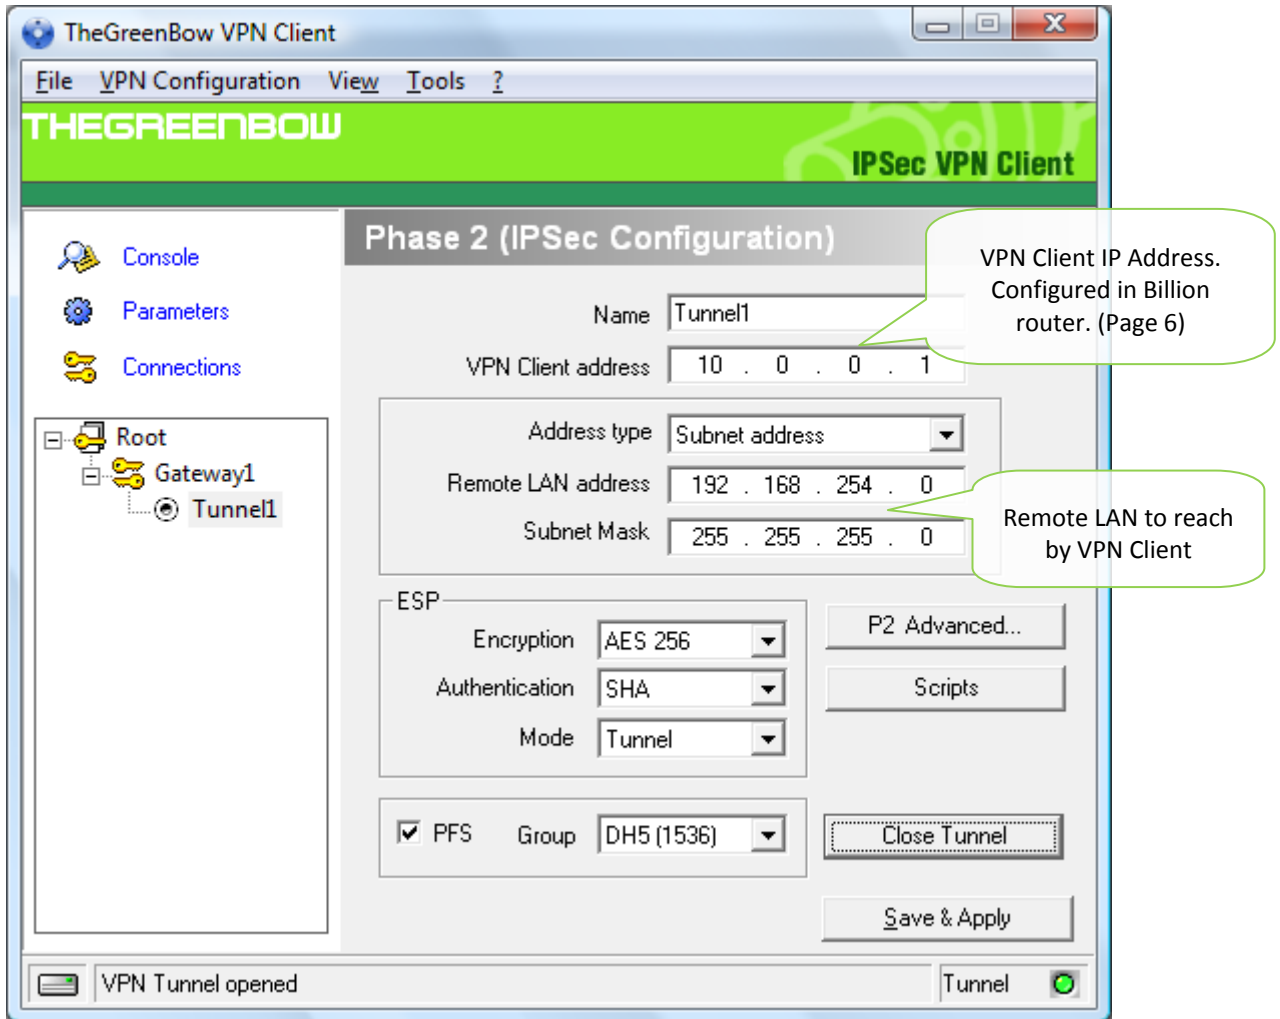

In this Phase 1 Advanced, select "Aggressive Mode" as we do in the Billion BiGuard S10 router.

The "Local ID" in the VPN Client shall match the "Remote ID" and the "Remote ID", the "Local ID" in the Billion BiGuard S10 VPN router.

Click on "Ok".

Now you've completed configuration of the Phase 1.

3.2 VPN Client Phase 2 (IPSec) Configuration

Phase 2 Configuration

The part ESP shall match the Phase2 group in the Billion BiGuard S10 VPN router (in the part “Proposal”, Encryption Protocol Authentication Protocol and PFS).

Click on “Save & Apply”.

And you have finished the configuration of the TheGreenBow VPN Client software.

3.3 Open IPSec VPN tunnels

Once both Billion BiGuard S10 router and TheGreenBow IPSec VPN Client software have been configured accordingly, you are ready to open VPN tunnels. First make sure you enable your firewall with IPSec traffic.

1. Click on **"Save & Apply"** to take into account all modifications we've made on your VPN Client configuration
2. Click on **"Open Tunnel"**, or generate traffic that will automatically open a secure IPSec VPN Tunnel (e.g. ping, IE browser)
3. Select **"Connections"** to see opened VPN Tunnels
4. Select **"Console"** if you want to access to the IPSec VPN logs and adjust filters to display less IPSec messaging. The following example shows a successful connection between TheGreenBow IPSec VPN Client and a Billion BiGuard S10 VPN router.

```

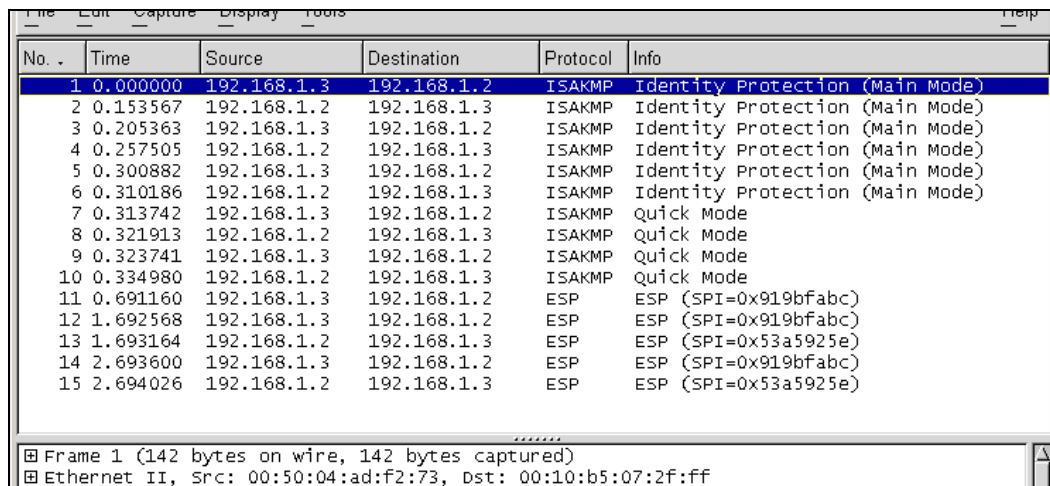

20081031 161848 Default (SA Gateway1-P1) SEND phase 1 Aggressive Mode [SA] [KEY_EXCH] [NONCE] [ID] [VID] [VID] [VID] [VID] [VID]
20081031 161849 Default (SA Gateway1-P1) RECV phase 1 Aggressive Mode [HASH] [SA] [KEY_EXCH] [NONCE] [ID] [NAT_D] [NAT_D] [VID] [VID]
20081031 161849 Default (SA Gateway1-P1) SEND phase 1 Aggressive Mode [HASH] [NAT_D] [NAT_D]
20081031 161849 Default phase 1 done: initiator id remote@thegreenbow.com, responder id support@thegreenbow.com
20081031 161849 Default (SA Gateway1-Tunnel1-P2) SEND phase 2 Quick Mode [HASH] [SA] [KEY_EXCH] [NONCE] [ID] [ID]
20081031 161849 Default (SA Gateway1-Tunnel1-P2) RECV phase 2 Quick Mode [HASH] [SA] [KEY_EXCH] [NONCE] [ID] [ID]
20081031 161849 Default (SA Gateway1-Tunnel1-P2) SEND phase 2 Quick Mode [HASH]
20081031 161919 Default (SA Gateway1-P1) SEND Informational [HASH] [NOTIFY] type DPD_R_U_THERE
20081031 161920 Default (SA Gateway1-P1) RECV Informational [HASH] [NOTIFY] type DPD_R_U_THERE_ACK
    
```

4 Tools in case of trouble

Configuring an IPSec VPN tunnel can be a hard task. One missing parameter can prevent a VPN connection from being established. Some tools are available to find source of troubles during a VPN establishment.

4.1 A good network analyser: Wireshark

Wireshark is a free software that can be used for packet and traffic analysis. It shows IP or TCP packets received on a network card. This tool is available on website <http://www.wireshark.org>. It can be used to follow protocol exchange between two devices. For installation and use details, read its specific documentation (<http://www.wireshark.org/docs/>).

No. .	Time	Source	Destination	Protocol	Info
1	0.000000	192.168.1.3	192.168.1.2	ISAKMP	Identity Protection (Main Mode)
2	0.153567	192.168.1.2	192.168.1.3	ISAKMP	Identity Protection (Main Mode)
3	0.205363	192.168.1.3	192.168.1.2	ISAKMP	Identity Protection (Main Mode)
4	0.257505	192.168.1.2	192.168.1.3	ISAKMP	Identity Protection (Main Mode)
5	0.300882	192.168.1.3	192.168.1.2	ISAKMP	Identity Protection (Main Mode)
6	0.310186	192.168.1.2	192.168.1.3	ISAKMP	Identity Protection (Main Mode)
7	0.313742	192.168.1.3	192.168.1.2	ISAKMP	Quick Mode
8	0.321913	192.168.1.2	192.168.1.3	ISAKMP	Quick Mode
9	0.323741	192.168.1.3	192.168.1.2	ISAKMP	Quick Mode

5 VPN IPSec Troubleshooting

5.1 « PAYLOAD MALFORMED » error (wrong Phase 1 [SA])

```

114920 Default (SA Gateway1-P1) SEND phase 1 Main Mode [SA][VID]
114920 Default (SA Gateway1-P1) RECV phase 1 Main Mode [NOTIFY]
114920 Default exchange_run: exchange_validate failed
114920 Default dropped message from 195.100.205.114 port 500 due to notification
type PAYLOAD_MALFORMED
114920 Default SEND Informational [NOTIFY] with PAYLOAD_MALFORMED error

```

If you have an « PAYLOAD MALFORMED » error you might have a wrong Phase 1 [SA], check if the encryption algorithms are the same on each side of the VPN tunnel.

5.2 « INVALID COOKIE » error

```

115933 Default message_recv: invalid cookie(s) 5918ca0c2634288f 7364e3e486e49105
115933 Default dropped message from 195.100.205.114 port 500 due to notification
type INVALID_COOKIE
115933 Default SEND Informational [NOTIFY] with INVALID_COOKIE error

```

If you have an « INVALID COOKIE » error, it means that one of the endpoint is using a SA that is no more in use. Reset the VPN connection on each side.

5.3 « no keystate » error

```

115315 Default (SA Gateway1-P1) SEND phase 1 Main Mode [SA][VID]
115317 Default (SA Gateway1-P1) RECV phase 1 Main Mode [SA][VID]
115317 Default (SA Gateway1-P1) SEND phase 1 Main Mode [KEY][NONCE]
115319 Default (SA Gateway1-P1) RECV phase 1 Main Mode [KEY][NONCE]
115319 Default (SA Gateway1-P1) SEND phase 1 Main Mode [ID][HASH][NOTIFY]
115319 Default ipsec_get_keystate: no keystate in ISAKMP SA 00B57C50

```

Check if the preshared key is correct or if the local ID is correct (see « Advanced » button). You should have more information in the remote endpoint logs.

5.4 « received remote ID other than expected » error

```

120348 Default (SA Gateway1-P1) SEND phase 1 Main Mode [SA][VID]
120349 Default (SA Gateway1-P1) RECV phase 1 Main Mode [SA][VID]
120349 Default (SA Gateway1-P1) SEND phase 1 Main Mode [KEY][NONCE]
120351 Default (SA Gateway1-P1) RECV phase 1 Main Mode [KEY][NONCE]
120351 Default (SA Gateway1-P1) SEND phase 1 Main Mode [ID][HASH][NOTIFY]
120351 Default (SA Gateway1-P1) RECV phase 1 Main Mode [ID][HASH][NOTIFY]
120351 Default ike_phase_1_recv_ID: received remote ID other than expected
support@thegreenbow.fr

```

The « Remote ID » value (see « Advanced » Button) does not match what the remote endpoint is expected.

5.5 « NO PROPOSAL CHOSEN » error

```

115911 Default (SA Gateway1-P1) SEND phase 1 Main Mode [SA][VID]
115913 Default (SA Gateway1-P1) RECV phase 1 Main Mode [SA][VID]
115913 Default (SA Gateway1-P1) SEND phase 1 Main Mode [KEY][NONCE]
115915 Default (SA Gateway1-P1) RECV phase 1 Main Mode [KEY][NONCE]
115915 Default (SA Gateway1-P1) SEND phase 1 Main Mode [ID][HASH][NOTIFY]
115915 Default (SA Gateway1-P1) RECV phase 1 Main Mode [ID][HASH][NOTIFY]
115915 Default phase 1 done: initiator id c364cd70: 195.100.205.112, responder id
c364cd72: 195.100.205.114, src: 195.100.205.112 dst: 195.100.205.114
115915 Default (SA Gateway1-Tunnell-P2) SEND phase 2 Quick Mode
[SA][KEY][ID][HASH][NONCE]
115915 Default RECV Informational [HASH][NOTIFY] with NO_PROPOSAL_CHOSEN error
115915 Default RECV Informational [HASH][DEL]
115915 Default Gateway1-P1 deleted

```

If you have an « NO PROPOSAL CHOSEN » error, check that the « Phase 2 » encryption algorithms are the same on each side of the VPN Tunnel.

Check « Phase 1 » algorithms if you have this:

```

115911 Default (SA Gateway1-P1) SEND phase 1 Main Mode [SA][VID]
115911 Default RECV Informational [NOTIFY] with NO_PROPOSAL_CHOSEN error

```

5.6 « INVALID ID INFORMATION » error

```

122623 Default (SA Gateway1-P1) SEND phase 1 Main Mode [SA][VID]
122625 Default (SA Gateway1-P1) RECV phase 1 Main Mode [SA][VID]
122625 Default (SA Gateway1-P1) SEND phase 1 Main Mode [KEY][NONCE]
122626 Default (SA Gateway1-P1) RECV phase 1 Main Mode [KEY][NONCE]
122626 Default (SA Gateway1-P1) SEND phase 1 Main Mode [ID][HASH][NOTIFY]
122626 Default (SA Gateway1-P1) RECV phase 1 Main Mode [ID][HASH][NOTIFY]
122626 Default phase 1 done: initiator id c364cd70: 195.100.205.112, responder id
c364cd72: 195.100.205.114, src: 195.100.205.112 dst: 195.100.205.114
122626 Default (SA Gateway1-Tunnell-P2) SEND phase 2 Quick Mode
[SA][KEY][ID][HASH][NONCE]
122626 Default RECV Informational [HASH][NOTIFY] with INVALID_ID_INFORMATION error
122626 Default RECV Informational [HASH][DEL]
122626 Default Gateway1-P1 deleted

```

If you have an « INVALID ID INFORMATION » error, check if « Phase 2 » ID (local address and network address) is correct and match what is expected by the remote endpoint.

Check also ID type ("Subnet address" and "Single address"). If network mask is not check, you are using a IPV4_ADDR type (and not a IPV4_SUBNET type).

5.7 I clicked on "Open tunnel", but nothing happens.

Read logs of each VPN tunnel endpoint. IKE requests can be dropped by firewalls. An IPSec Client uses UDP port 500 and protocol ESP (protocol 50).

5.8 The VPN tunnel is up but I can't ping !

If the VPN tunnel is up, but you still cannot ping the remote LAN, here are a few guidelines:

- Check Phase 2 settings: VPN Client address and Remote LAN address. Usually, VPN Client IP address should not belong to the remote LAN subnet
- Once VPN tunnel is up, packets are sent with ESP protocol. This protocol can be blocked by firewall. Check that every device between the client and the VPN server does accept ESP
- Check your VPN server logs. Packets can be dropped by one of its firewall rules.
- Check your ISP support ESP

Doc.Ref	tgbvpn_ug-billion-biguard-s10_en
Doc.version	1.0 – Nov 2008
VPN version	4.2+

- If you still cannot ping, follow ICMP traffic on VPN server LAN interface and on LAN computer interface (with Wireshark for example). You will have an indication that encryption works.
- Check the “default gateway” value in VPN Server LAN. A target on your remote LAN can receive pings but does not answer because there is a no “Default gateway” setting.
- You cannot access to the computers in the LAN by their name. You must specify their IP address inside the LAN.
- We recommend you to install Wireshark (<http://www.wireshark.org>) on one of your target computer. You can check that your pings arrive inside the LAN.

	Doc.Ref	tgbvpn_ug-billion-biguard-s10_en
	Doc.version	1.0 – Nov 2008
	VPN version	4.2+
