1 Introduction

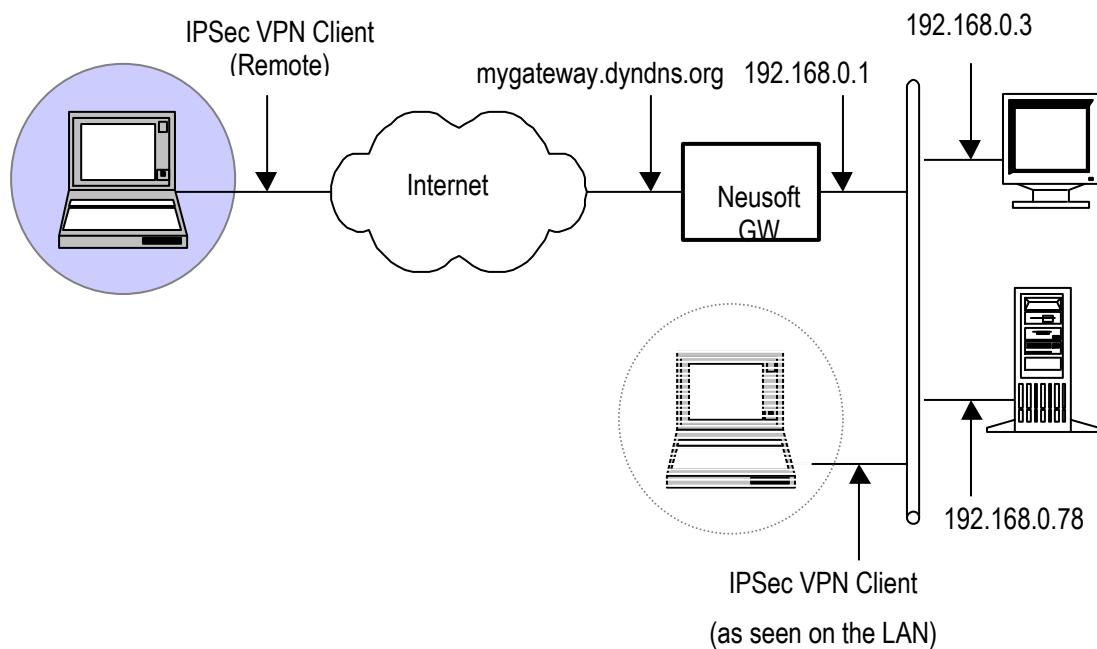

1.1 Goal of this document

This configuration guide describes how to configure TheGreenBow IPSec VPN Client with a NEUSOFT GW.

1.2 VPN Network topology

In our VPN network example (diagram hereafter), we will connect TheGreenBow IPSec VPN Client to the LAN behind the NEUSOFT GW. The VPN client is connected to the Internet with a DSL connection or through a LAN. All the addresses in this document are given for example purpose.

- NEUSOFT GW WAN IP Address will be 20.1.3.2(mygateway.dyndns.org)
- NEUSOFT GW LAN IP Address will be 192.168.0.1/24

2 NEUSOFT GW VPN configuration

This section describes how to build an IPSec VPN configuration with your NEUSOFT GW. Read NEUSOFT GW documentation for more details about these VPN gateways.

2.1 NEUSOFT GW Address

Go to **Configuration > Interfaces > Layer3 Interfaces** and edit WAN and LAN interfaces with the appropriate IP addresses values.

Layer3 Interfaces						
Interface	Active	MAC	MTU	IP Address	Floating IP Address	<input type="checkbox"/> Delete
vlan10	<input checked="" type="radio"/> on <input type="radio"/> off	00:A0:8E:A6:BE:60	1500	20.1.3.2/8		<input type="checkbox"/>
vlan403	<input checked="" type="radio"/> on <input type="radio"/> off	00:A0:8E:A6:BE:61	1500	100.1.2.254/24		<input type="checkbox"/>

2.2 NEUSOFT GW Router

Go to **Configuration > Routing > Default Routing Table**

Destination IP Address : 0.0.0.0
Mask Length : 0
Outgoing Interface : vlan10
Gateway : 20.1.3.1(Next Hop Address)
Metric : 1

New Route			
Destination IP Address:	0.0.0.0	Mask Length:	0
Outgoing Interface:	vlan10	Gateway:	20.1.3.1
Metric:	1 (1-255)		

2.3 NEUSOFT GW User

Go to **Configuration > VPNs > VPN Users >Users**

Name : TheGreenBow
ID Type : USER_FQDN
KEY ID : tgb@thegreenbow.com
Enable : checked

In our example, we will use a basic authentication for the user that will be activated by a prompt. Click on Apply when finished.

New User

Name:	TheGreenBow		
ID Type:	USER_FQDN	KEY ID:	tgb@thegreenbow.cc
Country Name(2-letter code):		State or Province Name:	
Locality (Town) Name:		Organization Name:	
Organizational Unit Name:		Common Name (FQDN):	
Email Address:			

2.4 NEUSOFT GW VPN

Go to **Configuration > VPNs >Auto IKE**

Name : tgb_dialup
Bind to VPN Tunnel : blank
Remote Peer : Dial-up User
User : TheGreenBow
Outgoing Interface : vlan10
Local IP Address : 20.1.3.2
Authentication Mode : PreShared Key
Key : 123456

New Tunnel

Name:	tgb_dialup	Bind to VPN Tunnel:	
Remote Peer:	Dial-up User	User:	TheGreenBow
Outgoing Interface:	vlan10	Local IP Address:	20.1.3.2
Authentication Mode:	PreShared Key	Key:	*****

Click on Apply when finished.Then edit advanced option of the tunnel by click on name in tunnel list.

In “**advanced settings**” ,fill in “**Local Subnet**” .

IP Address : 192.168.1.0
Mask Length : 24

Authentication

Authentication Method: Preshared Key

Key: *

Advanced Settings

Local Subnet

IP Address: Mask Length:

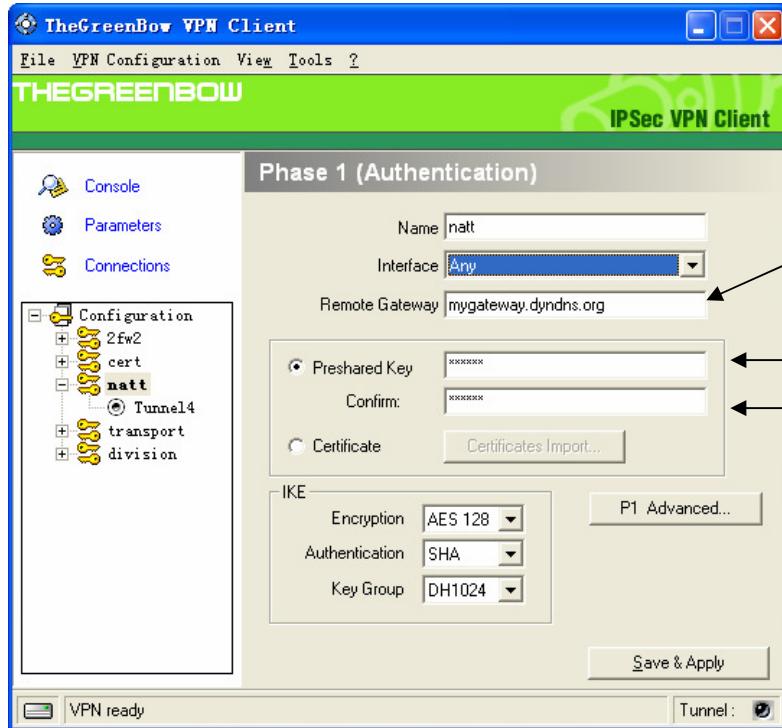

Remote Subnet

IP Address: Mask Length:

Click on Apply when finished. At last, please be sure the “**Enable**” is checked.

3 TheGreenBow IPSec VPN Client configuration

3.1 VPN Client Phase 1 (IKE) Configuration

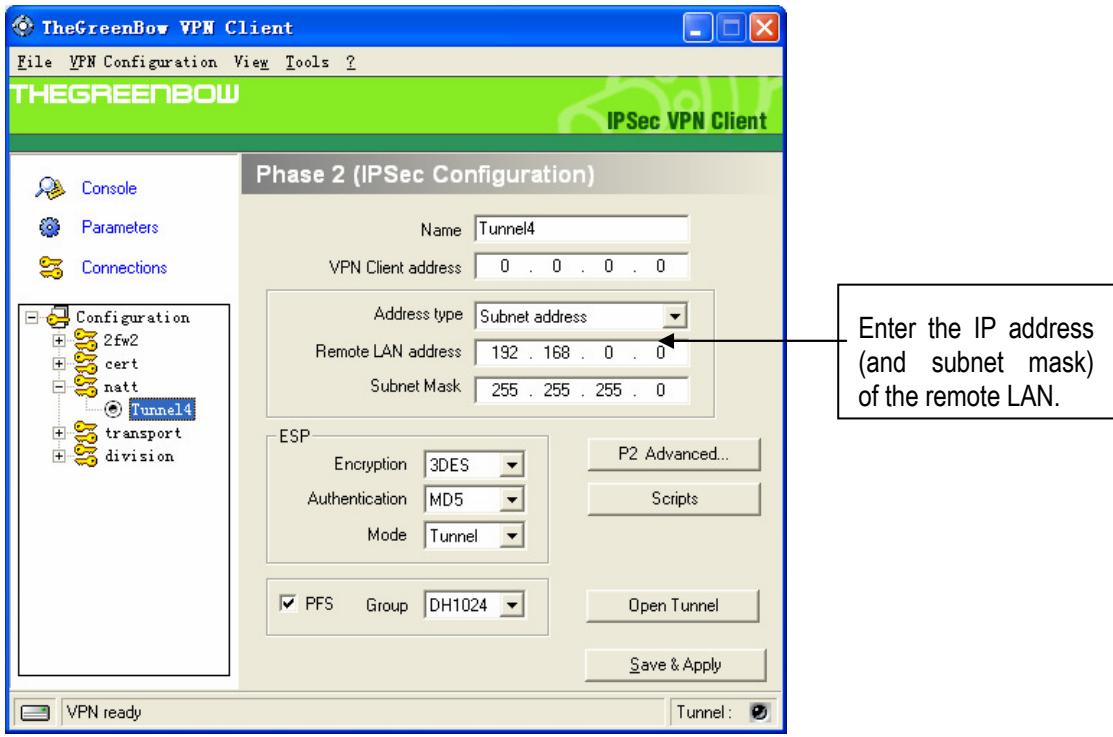

The remote VPN Gateway IP address is either an explicit IP address, or a DNS Name

123456

123456

Phase 1 configuration

3.2 VPN Client Phase 2 (IPSec) Configuration

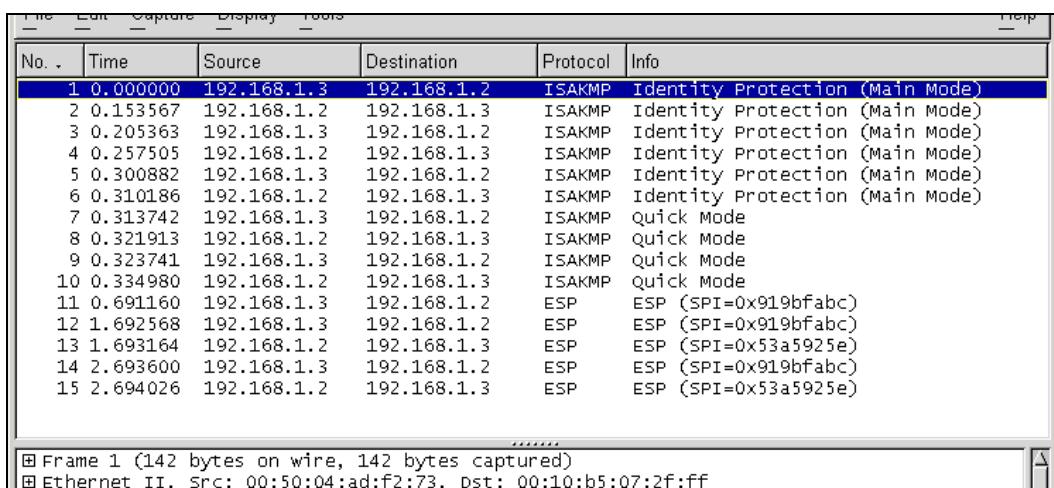

Phase 2 Configuration

3.3 Open IPSec VPN tunnels

Once both NEUSOFT GW and TheGreenBow IPSec VPN Client have been configured accordingly, you are ready to open VPN tunnels. First make sure you enable your firewall with IPSec traffic.

1. Click on "**Save & Apply**" to take into account all modifications we've made on your VPN Client configuration
2. Click on "**Open Tunnel**", or generate traffic that will automatically open a secure IPSec VPN Tunnel (e.g. ping, IE browser)
3. Select "**Connections**" to see opened VPN Tunnels
4. Select "**Console**" if you want to access to the IPSec VPN logs and adjust filters to display less IPSec messaging. The following example shows a successful connection between TheGreenBow IPSec VPN Client and a Microsoft Windows 2000 Server.

Doc.Ref	tgbvpn_ug_Neusoft Gw_en
Doc.version	1.0 – Jan.2008
VPN version	4.1x

Doc.version	1.0 – Jan.2008
VPN version	4.1x

4 Tools in case of trouble

Configuring an IPSec VPN tunnel can be a hard task. One missing parameter can prevent a VPN connection from being established. Some tools are available to find source of troubles during a VPN establishment.

4.1 A good network analyser: **ethereal**

Ethereal is a free software that can be used for packet and traffic analysis. It shows IP or TCP packets received on a network card. This tool is available on website <http://www.ethereal.com/>. It can be used to follow protocol exchange between two devices. For installation and use details, read its specific documentation.

5 VPN IPSec Troubleshooting

5.1 « PAYLOAD MALFORMED » error (wrong Phase 1 [SA])

```
114920 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [SA] [VID]
114920 Default (SA CNXVPN1-P1) RECV phase 1 Main Mode [NOTIFY]
114920 Default exchange_run: exchange_validate failed
114920 Default dropped message from 195.100.205.114 port 500 due to notification
type PAYLOAD_MALFORMED
114920 Default SEND Informational [NOTIFY] with PAYLOAD_MALFORMED error
```

If you have an « PAYLOAD MALFORMED » error you might have a wrong Phase 1 [SA], check if the encryption algorithms are the same on each side of the VPN tunnel.

5.2 « INVALID COOKIE » error

```
115933 Default message_recv: invalid cookie(s) 5918ca0c2634288f 7364e3e486e49105
115933 Default dropped message from 195.100.205.114 port 500 due to notification
type INVALID_COOKIE
115933 Default SEND Informational [NOTIFY] with INVALID_COOKIE error
```

If you have an « INVALID COOKIE » error, it means that one of the endpoint is using a SA that is no more in use. Reset the VPN connection on each side.

5.3 « no keystate » error

```
115315 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [SA] [VID]
115317 Default (SA CNXVPN1-P1) RECV phase 1 Main Mode [SA] [VID]
115317 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [KEY] [NONCE]
115319 Default (SA CNXVPN1-P1) RECV phase 1 Main Mode [KEY] [NONCE]
115319 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [ID] [HASH] [NOTIFY]
115319 Default ipsec_get_keystate: no keystate in ISAKMP SA 00B57C50
```

Check if the preshared key is correct or if the local ID is correct (see « Advanced » button). You should have more information in the remote endpoint logs.

5.4 « received remote ID other than expected » error

```
120348 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [SA] [VID]
120349 Default (SA CNXVPN1-P1) RECV phase 1 Main Mode [SA] [VID]
120349 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [KEY] [NONCE]
120351 Default (SA CNXVPN1-P1) RECV phase 1 Main Mode [KEY] [NONCE]
120351 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [ID] [HASH] [NOTIFY]
120351 Default (SA CNXVPN1-P1) RECV phase 1 Main Mode [ID] [HASH] [NOTIFY]
120351 Default ike_phase_1_recv_ID: received remote ID other than expected
support@thegreenbow.fr
```

The « Remote ID » value (see « Advanced » Button) does not match what the remote endpoint is expected.

5.5 « NO PROPOSAL CHOSEN » error

```

115911 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [SA] [VID]
115913 Default (SA CNXVPN1-P1) RECV phase 1 Main Mode [SA] [VID]
115913 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [KEY] [NONCE]
115915 Default (SA CNXVPN1-P1) RECV phase 1 Main Mode [KEY] [NONCE]
115915 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [ID] [HASH] [NOTIFY]
115915 Default (SA CNXVPN1-P1) RECV phase 1 Main Mode [ID] [HASH] [NOTIFY]
115915 Default phase 1 done: initiator id c364cd70: 195.100.205.112, responder id
c364cd72: 195.100.205.114, src: 195.100.205.112 dst: 195.100.205.114
115915 Default (SA CNXVPN1-CNXVPN1-P2) SEND phase 2 Quick Mode
[SA] [KEY] [ID] [HASH] [NONCE]
115915 Default RECV Informational [HASH] [NOTIFY] with NO_PROPOSAL_CHOSEN error
115915 Default RECV Informational [HASH] [DEL]
115915 Default CNXVPN1-P1 deleted

```

If you have an « NO PROPOSAL CHOSEN » error, check that the « Phase 2 » encryption algorithms are the same on each side of the VPN Tunnel.

Check « Phase 1 » algorithms if you have this:

```

115911 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [SA] [VID]
115911 Default RECV Informational [NOTIFY] with NO_PROPOSAL_CHOSEN error

```

5.6 « INVALID ID INFORMATION » error

```

122623 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [SA] [VID]
122625 Default (SA CNXVPN1-P1) RECV phase 1 Main Mode [SA] [VID]
122625 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [KEY] [NONCE]
122626 Default (SA CNXVPN1-P1) RECV phase 1 Main Mode [KEY] [NONCE]
122626 Default (SA CNXVPN1-P1) SEND phase 1 Main Mode [ID] [HASH] [NOTIFY]
122626 Default (SA CNXVPN1-P1) RECV phase 1 Main Mode [ID] [HASH] [NOTIFY]
122626 Default phase 1 done: initiator id c364cd70: 195.100.205.112, responder id
c364cd72: 195.100.205.114, src: 195.100.205.112 dst: 195.100.205.114
122626 Default (SA CNXVPN1-CNXVPN1-P2) SEND phase 2 Quick Mode
[SA] [KEY] [ID] [HASH] [NONCE]
122626 Default RECV Informational [HASH] [NOTIFY] with INVALID_ID_INFORMATION error
122626 Default RECV Informational [HASH] [DEL]
122626 Default CNXVPN1-P1 deleted

```

If you have an « INVALID ID INFORMATION » error, check if « Phase 2 » ID (local address and network address) is correct and match what is expected by the remote endpoint.

Check also ID type (“Subnet address” and “Single address”). If network mask is not check, you are using a IPV4_ADDR type (and not a IPV4_SUBNET type).

5.7 I clicked on “Open tunnel”, but nothing happens.

Read logs of each VPN tunnel endpoint. IKE requests can be dropped by firewalls. An IPSec Client uses UDP port 500 and protocol ESP (protocol 50).

5.8 The VPN tunnel is up but I can't ping !

If the VPN tunnel is up, but you still cannot ping the remote LAN, here are a few guidelines:

- Check Phase 2 settings: VPN Client address and Remote LAN address. Usually, VPN Client IP address should not belong to the remote LAN subnet
- Once VPN tunnel is up, packets are sent with ESP protocol. This protocol can be blocked by firewall. Check that every device between the client and the VPN server does accept ESP
- Check your VPN server logs. Packets can be dropped by one of its firewall rules.
- Check your ISP support ESP

Doc.Ref	tgbvpn_ug_Neusoft Gw_en
Doc.version	1.0 – Jan.2008
VPN version	4.1x

- If you still cannot ping, follow ICMP traffic on VPN server LAN interface and on LAN computer interface (with Ethereal for example). You will have an indication that encryption works.
- Check the “default gateway” value in VPN Server LAN. A target on your remote LAN can receive pings but does not answer because there is no “Default gateway” setting.
- You cannot access to the computers in the LAN by their name. You must specify their IP address inside the LAN.
- We recommend you to install ethereal (<http://www.ethereal.com>) on one of your target computer. You can check that your pings arrive inside the LAN.
